**AEROSPACE****AUTOMATIC HIGH VOLTAGE ELECTRICAL TEST SYSTEMS**

Efficient replacement for manual testing

Detection, measurement and diagnosis of all faults, guaranteed

A faster solution for Electrical Testing that reduces production bottlenecks

- Automatic Continuity test, Short Circuit test, High Voltage Insulation test and Dielectric test.
- Automatic Function Test of Active components. Solenoids, relays, sensors, ignitors...
- Automatic delivery of test report showing all measurements and results. Automatic creation of test and results datalog for future reference.

## Rapid, Accurate, Automatic, Simple to Use

The **MK TEST** Systems' high voltage test system automates your testing process, testing every connection and delivering clear test reports that show measured values AND diagnose faults to enable fast repair and completion.

The **MK TEST** system is delivered complete with MK's test management software that enables simple creation of test programmes for any engine variant via netlist import and/or auto learn. Operator instructions guide the test engineer to ensure fast, correct operation.
